Jerry Yang

Melbourne,Australia | +61 0434 243 454 | jerry.yang.data@gmail.com | linkedin.com/in/jerry-yang-chunyu

PROFESSIONAL SUMMARY

Data analytics and AI (Gen AI) professional with hands-on experience building analytics pipelines, machine-learning and NLP models, and deploying AI workflows on cloud platforms (AWS, Azure). Strong record of translating data into operational improvements across consulting, transport, finance, health and real estate. Skilled in Python, SQL, Power BI and MLOps, with an applied focus on automation, reliability, and communication of insights to business leaders.

TECHNICAL SKILLS

Programming & Data: Python (Pandas, NumPy), SQL (MySQL), R; data wrangling, feature engineering, and data quality validation for large analytical datasets.

Data & Cloud Pipelines: ETL automation, SQL query optimisation, orchestration with n8n and AWS Step Functions, serverless workflows using Lambda; git-hub /lab versioning and monitoring for data reliability.

Natural Language Processing (NLP): Sentiment analysis, entity extraction, prompt engineering for GenAI use cases, text cleaning and HTML extraction, embedding-based matching, and chatbot data structuring.

Business & Domain: agile tools: Jira, Confluence, stakeholder engagement & presentation

Machine-Learning Models: Scikit-Learn, TensorFlow, PyTorch; regression, classification, time-series forecasting; model evaluation (AUC, RMSE, MAPE), cross-validation, and hyperparameter tuning.

MLOps & Cloud: Azure Databricks, AWS (S3, Athena, SES, Bedrock); model deployment and integration with dashboards; containerisation (Docker) and CI/CD familiarity.

Statistics & Experimentation: A/B testing, causal inference, hypothesis testing, and design of experiments for decision support.

Visualisation & Reporting: Power BI (DAX, KPI cards, drill-downs), Tableau, Excel; dashboard storytelling for executives.

PROFESSIONAL EXPERIENCE

Genex Consulting — Data Analyst (Contract) Melbourne ·Jun 2025 – Sep 2025

- Optimised SQL queries and view logic, reducing query time by around 40% and stabilising Power BI refreshes for transport analytics.
- Built Python and SQL pipelines aggregating congestion metrics across more than 100,000 daily records to detect anomalies and support operational route scheduling.
- Developed interactive Power BI dashboards with DAX and drill-downs, integrating live database connections for near real-time insights.
- Collaborated with engineering teams to design validation checks and automated alerts, improving data quality and reliability across reporting datasets.

AIKE International — Data Analyst (Part-time) Melbourne ·Oct 2021 – Sep 2024

- Delivered analytics for residential property projects using Python, SQL and GIS to support pricing and acquisition decisions across a ~$50M portfolio.
- Applied NLP techniques such as sentiment analysis and topic extraction to analyse over 10,000 online property comments, uncovering buyer sentiment and market trends.
- Automated data extraction and reporting templates in Python and SQL, reducing manual preparation time by approximately 70%.
- Designed Power BI KPIs and benchmarking dashboards that improved visibility of project performance and informed cross-team collaboration in legal and finance.

Centre for Business Analytics, Melbourne Business School — Business Analyst Fellowship Melbourne · Sep 2023 – Jan 2024

- Built machine-learning models (logistic regression, XGBoost) to estimate the impact of advertising regulations on website traffic and revenue, achieving R^2 values up to 0.84.
- Designed A/B testing frameworks with pre- and post-period validity checks and implemented automated pipelines for training data preparation.
- Created interactive Power BI dashboards that allowed marketing and compliance teams to simulate policy scenarios and monitor campaign outcomes.
- Presented results to senior stakeholders, translating statistical findings into actionable regulatory and go-to-market recommendations.

Downer — Analytics Lab — Data Analyst Melbourne · Aug 2023 – Sep 2023

- Audited stock and production data across 24 asphalt plants using SQL and R, identifying recurring discrepancies that led to corrective process improvements.
- Developed automated Power BI dashboards and anomaly detection scripts for real-time inventory monitoring.
- Findings were adopted by Operations, improving reporting consistency and reducing material losses.

Melbourne Business School — Teaching Assistant Melbourne · Apr 2024 – Aug 2024

- Mentored over 20 postgraduate students on SQL, Python, Databricks and end-to-end machine-learning workflows, covering feature engineering, model evaluation and interpretation.
- Guided students in presenting technical results through clear visual storytelling and communication tailored to non-technical audiences.

PROJECT EXPERIENCE

AMR Chatbot for Antimicrobial Data Collection — University of Oxford Oxford · Mar 2025 – Aug 2025

- Developed an AI-powered chatbot integrating LINE UI, REDCap API, and Python back end to automate antimicrobial survey capture.
- Applied NLP and image recognition for entity extraction and prompt-based text classification, achieving 99% data accuracy and reducing manual cleaning by 80%.

Data & Cloud Workflow Automation Jul 2025 – Oct 2025

- Built AWS-based automation pipelines (SES, S3, Lambda, Bedrock) to process client leads and generate AI-driven email responses.
- Implemented n8n orchestration with prompt engineering, error handling, and logging for reliable production workflows.
- Delivered live dashboards using LLM scoring to prioritise high-value leads and cut manual triage time by 60%.

Oxford 180DC — UrbanChain Energy Project Oxford · Jan 2025 – Mar 2025

- Developed Python and GIS-based predictive models to forecast household energy storage and consumption.
- Built interactive dashboards combining real-time IoT data with predictive model outputs, enabling approximately 20% reduction in energy storage oversupply and earned the Best Consultant Award for project delivery.

EDUCATION

University of Oxford — MSc Modelling for Global Health (Data Science) Oxford, UK · 2024 – 2025

Weighted Average Mark (WAM): High Distinction ***(Cohort Dux)***

Melbourne Business School — Master of Business Analytics (Data Science) Melbourne, AU · 2023 - 2023

Weighted Average Mark (WAM): High Distinction ***(Ranked 2nd out of 54)***

University of Melbourne — Bachelor of Commerce (Actuarial Studies) Melbourne, AU · 2020 – 2022

Weighted Average Mark (WAM): Distinction
